

## Individual Project Reporting Sheet

### Student Details

Name:	AYUNNI JASMINE BINTI ABDUL AZIZ @ MUHIYIDDIN	Section:	2	Date:	18/11/2020
Topic:	Bus Ticket Reservation System	Group Name:	Group 7		

### Implementation Details

<i>What do I know about the project? (Project information and its functionalities)</i>	<i>Which part of the project I need to develop? (Elaborate all the specific tasks assigned by your group leader)</i>	<i>How do I develop it? (Specific component, API, function, etc., which needed to develop your part)</i>
There are 5 requirements in total, and the php element that should be used is multidimensional array.	The multidimensional array, and the functions needed to book and print out customer's boarding pass and payment details.	I assigned the bus seats into a multidimensional array in php, and used a foreach loop to display the elements.  Then I used functions to book each different seats as well as print out boarding pass.
